

Nithin Arisetty

Senior Business Intelligence Analyst | Data Analytics • Financial Data • Automation

BI Engineering and Data Analytics professional with experience designing scalable data solutions, data quality frameworks, and analytics systems within large-scale operational environments at Amazon. Strong expertise in SQL, Python, AWS (S3, Redshift, Athena), and Power BI, with hands-on experience in data modelling, transformation pipelines, and building reliable data architectures that support decision-making at scale. Proven ability to solve complex data problems, optimise data workflows, and collaborate with cross-functional stakeholders to deliver high-impact, production-ready BI solutions.

github.com/arisettynithin-maker

CORE SKILLS

SQL (CTEs, Window Functions)

Python(Pandas, NumPy)

AWS (S3, Redshift, Athena)

Power BI (DAX, Data Modeling, RLS)

Data Modelling

ETL / ELT Pipelines & Data Transformation

Root Cause Analysis

KPI & Metric Development

Anomaly Detection & Pattern Analysis

WORK EXPERIENCE

Senior BI Analyst – Business Analytics

Amazon UK

10/2025 - Present

London, United Kingdom

Official title: Logistics Scheduler; scope expanded into advanced SQL analytics, Python-based data analysis, and AWS-backed reporting for leadership decision support.

Role Achievements & Business Impact:

- Accomplished data-driven decision support across a €80M+ logistics network , improving operational efficiency by leveraging SQL-based analytics and Python-driven data pipelines
- Accomplished improvement in data accuracy and reliability by implementing validation frameworks and data quality checks , ensuring consistency across downstream reporting systems
- Accomplished reduction of manual data processing effort by 40% by designing automated ETL pipelines , improving timeliness and scalability of analytics workflows
- Accomplished delivery of 50+ KPI metrics and dashboards by developing Power BI reporting solutions, enabling real-time monitoring of performance, risks, and system health
- Accomplished identification and resolution of data inconsistencies through structured root cause analysis , improving data integrity and decision confidence
- Accomplished cross-functional collaboration with operations, product, and analytics teams , ensuring alignment on metrics, data definitions, and reporting standards
- Accomplished faster decision-making cycles (~30%) by improving data availability and usability , supporting time-sensitive business processes

Business Intelligence Analyst

Amazon UK

09/2023 - 09/2025

Milton Keynes, United Kingdom

Role Achievements & Business Impact:

- Accomplished analysis of 2M+ weekly records to identify trends and inefficiencies , supporting operational optimisation and performance improvements
- Accomplished enhancement of reporting accuracy and stakeholder adoption by 40% by building scalable SQL-based data models and dashboards
- Accomplished proactive issue detection by designing performance tracking frameworks and anomaly detection systems
- Accomplished reduction in reporting turnaround time by 25% through root cause analysis and process optimisation initiatives
- Accomplished alignment of reporting with business objectives by collaborating with stakeholders to define KPIs and standardise metrics
- Accomplished improvement in data workflows by identifying bottlenecks and implementing efficiency-driven solutions

GITHUB ANALYTICS PORTFOLIO

E-commerce Lifecycle Analytics (2M+ Events)

<https://github.com/arissetynithin-maker/Ecommerce-Lifecycle-Analytics.git>

- Analysed ~2M+ user events to evaluate end-to-end customer funnel (view → cart → purchase), identifying key drop-off points and conversion bottlenecks
- Built cohort-based retention models to track repeat behaviour and lifecycle trends across user segments
- Performed customer segmentation using behavioural metrics (engagement, frequency, spend) to identify high-value and at-risk users
- Delivered actionable insights on conversion improvement, retention strategies, and pricing opportunities

Customer Intelligence Copilot (AI-Powered Analytics Application)

<https://github.com/arissetynithin-maker/customer-intelligence-copilot.git>

- Built an AI-powered analytics application processing 100K+ customer records using Python and LLM integration
- Automated pattern detection and anomaly identification to surface risk signals and behavioral insights
- Reduced manual analysis effort and enabled faster decision-making through interactive data exploration

EDUCATION

MSc in Finance and Management

Cranfield University, United Kingdom

09/2022 - 09/2023

Key Academic Highlights:

- Strong focus on statistical analysis, financial modelling, and applied research, with exposure to credit risk, fixed income analytics, and regulatory frameworks.

Bachelor of Business Administration (Finance)

Christ University, India

06/2018 - 06/2021

Key Academic Highlights:

- Built a solid quantitative and analytical foundation through coursework in business statistics, financial risk management, and market analysis.

SOFT SKILLS

Data-Driven Decision Making

AI-driven analytics

Stakeholder Management & Cross-Functional Collaboration

Strategic Thinking & Business Impact Orientation

Process Optimisation & Automation Mindset

Adaptability in Fast-Paced Environments
